	live attenuated influenza vaccine	FLUCELVAX [®] 2017-2018 vaccine
Study design	Randomized controlled trial	Phase I clinical trial
Study population	Healthy adults aged 18-64 years	Healthy adults aged 18-64 years
Intervention	Live attenuated influenza vaccine	FLUCELVAX [®] 2017-2018 vaccine
Outcome measures	Efficacy, safety, immunogenicity	Efficacy, safety, immunogenicity
Results	Significant reduction in influenza-like illness (ILI) cases compared to placebo	No significant difference in ILI cases compared to placebo
Conclusion	Live attenuated influenza vaccine is effective in preventing ILI in healthy adults	FLUCELVAX [®] 2017-2018 vaccine is not effective in preventing ILI in healthy adults
